The medical equipments in our clinic

The main medical equipments for glaucoma examination

Humphrey Field Analyzer

We use this machine to observe the detailed condition of the center part in your field of vision. It is helpful for diagnosis and observation of glaucoma.

Goldmann Perimetry (GP)

We use it to measure dynamic sight by using dynamic index. It is also used to examine 180 degrees field of vision. With this equipment, we can know the whole shape of your sight of vision.

The equipments for retina examination

The camera for a fundascopy TRC-NW7SF

With this camera, we can make a diagnosis very precisely, because the camera shows a blood current in your veins. It is very useful for examining diabetic retinopathy.

OCT (Optical Coherence Tomograph)

The equipment for fundus examination. It uses infrared rays and can observe the cross section of retina that had been impossible without this equipment. We can make accurate and quick diagnosis for retina disease, especially for macula lutea sickness

Photocoagulation Equipment. (Green Laser Photocoagulation Equipment)

We use this equipment for prevention and treatment of the detached retina. Laser surgery helps to join the retina and other tissues together. ※.we use it also for diabetic retinopathy, a complication of diabetes

The equipments for dry eyes

Dacryon Plug

We insert this plug into the gateway of a lachrymal gland and store tear in the surface of the eyeballs. It is one of the effective cures to dry eye .If you are not improving with eye drops, please ask us about this equipment.

Pediatric Ophthalmology

We are going to have equipments for Pediatric Ophthalmology.

Surgical treatments

Cataract Surgery

The only way to cure cataract is surgery. This surgery is a procedure to remove the lens of your eye and, in most cases, replace it with an artificial lens.

This is used to treat the clouding of the normally clear lens of your eye. We offer cataract surgery with intraocular lens implantation every Monday.

Hordeolum/Chalazion

If a surgical operation is necessary, we will cut open with your permission.

The specialist schedule

retina, dry-eyes, uveitis, and pediatric ophthalmology.

◎...All day / △...Half a day
